

RTx Trench Roller

The safer trench compaction solution

When safety matters, the RTx is your best choice

SC3 – Infrared remote control system:

Protecting the job site. Best-in-class remote control designed with safety in mind. A third receiving eye on top of the unit ensures uninterrupted operation under shoring cross bars.

- Unsurpassed infrared technology requires the operator to maintain line-of-site at all times
- Eliminates dangerous blind spots (that can occur with radio control) keeping the job site and workers better protected
- Machine stops when operator lets go of the remote control joysticks
- Machine stops moving and vibrating if the operator comes within three feet of the roller's receiving eyes
- Multiple rollers can be used on the same job site without interference (16 channel transmission)

RTx Trench Roller

There's more...

Choose your engine:

Whichever engine option is chosen, contractors will find the same industry leading features and high performance.

- 19.8-hp Kohler diesel engine
- 20.7-hp Kubota diesel engine

5-year warranty:

Varies depending on engine choice.

- Kubota engine: Standard factory 5-year warranty on machine and a 3-year or 3,000 hour limited engine warranty via Kubota warranty authorized dealer network.
- Kohler engine: 5-year bumper to bumper transferable warranty. Administered through Wacker Neuson's warranty program. Warranty stays with the machine no matter how many times it is resold within the 5-year period. (US and Canada)

No maintenance lower end:

Best-in-class maintenance-free lower end saves time, money and increases the unit's uptime

- Exclusive lifetime lubricated bearings and drive gears with patented lube free exciter gears
- There is no oil that needs to be changed

RTx flexible drums:

More machine for the money

- Two-in-one machine with flexible drum width
- Machine's drums can be changed from 32-inches to 22-inches
- Easy to remove extension with central mounting system protects bolts from exposure to damage during operation

Proven compaction results:

Industry's original articulated trench roller design

- Original articulated roller design with below the axle exciters allows for efficient transfer of compaction energy to the soil
- Compact design with low center of gravity
- High and low compaction force provides flexibility depending on the job
